Course Outcomes

- 1 AI as one workload in the run-grow-transform portfolio, not bolted on — and the three portfolio failures from treating AI as a side program
- 2 Five-criterion infrastructure test across hyperscaler, sovereign, on-prem, and hybrid — with regional forcing factors that override
- 3 Build vs buy vs compose with three concrete criteria — and the "buy that turned into build" pattern spotted via the consulting-to-license ratio
- 4 Talent strategy differentiated per capability bucket — and the SI dependency trap with the knowledge-transfer contractual fix
- 5 Four operational risks unique to AI and BCDR including vendor outage failover plus graceful degradation that's actually tested
- 6 A three-metric board reporting structure that holds AI alongside ERP, cloud, and security with the same calibration
- 7 A four-rhythm operating cadence with three cross-functional partners (CDO, CISO, CFO) and a delegation framework that prevents CIO-as-bottleneck
- 8 A one-page CIO AI portfolio statement + 4 trust trip-wires + interactive portfolio builder
