40 MIN

AI Foundations

A ~40-minute foundations course for non-technical professionals — calibrated literacy, not hype or fear. What AI is, how LLMs work in plain English, where AI fits, the risks to watch, how to evaluate claims, 5 prompt patterns, durable habits, a 2-week starter plan.

Course Overview

For non-technical professionals starting their AI journey in 2026. Eight chapters across the foundations of calibrated AI literacy: the landscape (Stanford AI Index 78% adoption, McKinsey 71% gen-AI use, Gartner trough of disillusionment); how LLMs actually work (tokens, training, next-token prediction, why hallucinations happen, retrieval grounding); where AI fits in everyday work (5 categories that work — drafting, summarising, translating, classifying, code — 3 that don't — open-ended research, judgement calls, identity facts); privacy + bias risks anchored on 3 verifiable cases (Mata v. Avianca S.D.N.Y.

FORMAT: Self-paced · 8 chapters · audio-narrated slides · interactive end-of-course builder · free certificate on completion

Who Is This For?

1

Anyone starting their AI journey

2

Non-technical professionals

3

Managers + analysts

4

L&D teams

Learning Outcomes

- 1** A working mental model of what current AI actually does — and the boundary where it stops being reliable
- 2** How LLMs really work in plain English — tokens, training, next-token prediction, why hallucinations happen, retrieval grounding
- 3** The 5 use categories that consistently ship (drafting · summarising · translating · classifying · code) and the 3 that don't
- 4** How to evaluate any AI claim — Tetlock calibration > confidence, the 3 questions for any vendor productivity number
- 5** 5 hands-on prompt patterns: role+task+format+constraints+examples, outline-first, verify-the-citation, rewrite-for-audience, critique-my-draft
- 6** The privacy + bias awareness anchored on real cases — Mata v. Avianca, Air Canada Moffatt, Bloomberg resume study
- 7** A 2-week starter plan with the use-it-Monday habit and 4 trust trip-wires you don't cross

8-Chapter Curriculum

Self-paced, audio-narrated slide format. Each chapter ends with a "Monday move" the learner can apply that week.

01

What AI is (and isn't)

CHAPTER 1 · 5 MIN · NARRATED + INTERACTIVE

- Stanford AI Index 2025: 78% adoption (up from 55%).
- McKinsey: 71% regularly use gen AI.
- ChatGPT reached 100M users in 2 months.
- The 3 things people mean by "AI" — machine learning, LLMs, marketing-speak.
- Gartner trough of disillusionment.
- Pew 23% have tried ChatGPT.

02

How LLMs actually work

CHAPTER 2 · 4 MIN · NARRATED + INTERACTIVE

- Plain English.
- Tokens.
- Training on trillions of tokens (GPT-4 ~\$100M, once).
- Next-token prediction — the model produces plausible-sounding text, not retrieved facts.
- Why hallucinations happen.
- Stanford "Hallucinating Law" 17–34% even with retrieval grounding.

03

Where AI fits in everyday work

CHAPTER 3 · 5 MIN · NARRATED + INTERACTIVE

- MIT/BCG/Harvard/Goldman 2023-24: 15–40% productivity gains on knowledge work. 5 categories that work: drafting
- summarising
- translating
- classifying
- code. 3 that work less reliably: open-ended research, judgemental decisions, identity facts. MS Work Trend Index ~30% for active users.

04

Privacy and bias risks

CHAPTER 4 · 4 MIN · NARRATED + INTERACTIVE

- 3 verifiable cases: Mata v.
- Avianca (S.D.N.Y.
- Jun 2023, \$5K + letters to judges), Moffatt v.
- Air Canada (BC CRT Feb 2024, CA\$812), Bloomberg resume study (Mar 2024, reproducible bias).
- Personal-data rule: enterprise tools for sensitive data.
- EU AI Act Art. 50 transparency + Art. 99 fines from Aug 2 2026.

05

Evaluating AI claims

CHAPTER 5 · 4 MIN · NARRATED + INTERACTIVE

- Tetlock: calibration > confidence.
- The 3 questions: studied population (who exactly?), compared to what (the honest baseline), what didn't get measured (quality, re-work, verification).
- Pew 2025: 70% prefer disclosure, 9% prefer hidden AI.

06

Hands-on prompts that work

CHAPTER 6 · 4 MIN · NARRATED + INTERACTIVE

- 5 patterns: (1) role+task+format+constraints+examples, (2) ask for structure first, (3) verify the citation, (4) rewrite my draft for X audience, (5) critique my draft.
- Worked across Copilot, ChatGPT, Claude.
- Boring is the feature.

07

Habits that stick

CHAPTER 7 · 4 MIN · NARRATED + INTERACTIVE

- Why most initiatives drift in 4 weeks: integration friction, uncalibrated trust, no accountability. 3 fixes: use-it-Monday, pair with one colleague (biggest predictor of durable adoption), track simply (time/quality/comfort).
- WEF Future of Jobs 2025: upskilling is the durable response.

08

Making it stick: your 2-week starter plan

CHAPTER 8 · 4 MIN · NARRATED + INTERACTIVE

- Not 90 days. Not a quarter. 2 weeks. Pick 2 use cases
- pair with one colleague
- 4 trust trip-wires (no personal data to free tools, verify every specific fact, no AI signs anything binding, no "set and forget"). Interactive starter-plan builder.
