Course Brief

DURATION	36 min · 8 modules · self-paced
FORMAT	Audio-narrated slide chapters with synchronized progress tracking. Interactive end-of-course Markdown builder you take to the next meeting. Free verifiable certificate on completion.
AUDIENCE	Utility executives, grid operators, generation operators, demand planning leaders, utility customer ops.
PREREQUISITES	No technical prerequisites. The material is written for business decision-makers and assumes only general business literacy.

Course Outcomes

- 1 AI must augment operational reliability, not threaten it — grid stability and worker safety are non-negotiable
- 2 5 high-value plays — demand forecasting · grid management · generation optimisation · predictive maintenance · customer ops
- 3 Keep operator-in-the-loop on grid management — NERC + FERC + PUC oversight makes it non-negotiable
- 4 Run renewables forecasting and battery dispatch optimisation — where AI directly impacts revenue at scale
- 5 Use AI to extend asset inspection intervals — never to eliminate them (OSHA + worker safety)
- 6 Hold the customer disconnection line — AI flags, humans decide
- 7 Treat OT + IT + AI cybersecurity as one problem — 4 attack vectors, 3 defensive patterns
- 8 18-month rollout with 4 trust trip-wires and an interactive builder for your CIO, COO, or board
