Course Outcomes

- 1 6 operations AI plays that consistently produce measurable savings — forecasting, procurement docs, logistics, predictive maintenance, inventory, supplier risk
- 2 3 pitches that consistently disappoint — named explicitly so the budget redirects
- 3 The data-stable filter that decides which plays to start with in your specific operation
- 4 The two-layer demand forecasting model — what beats the median MAPE trap
- 5 The 3-tier procurement human-in-the-loop with audit posture
- 6 The AI-amplifying-OR framing for logistics — where AI augments operational research, not replaces it
- 7 The dynamic safety stock approach that solves stock-outs and overstock together
- 8 A 2-quarter roadmap with operational KPIs (procurement capacity, service level, working capital) — not AI metrics
