Course Outcomes

- 1 Most AI projects fail at the data step — recognise the pattern and stop it
- 2 5 pillars of data foundations — quality · lineage · governance · privacy · platform — scored independently
- 3 3 anti-patterns that waste budgets — buy platform without fixing data, ocean-boil cleanup projects, disconnected data team
- 4 Apply the DAMA-DMBOK quality framework with 4 dimensions (accuracy · completeness · freshness · consistency)
- 5 Build defensible lineage — EU AI Act Art 15 + NIST AI RMF + GDPR Art 30 traceability
- 6 Choose the right architecture — lakehouse + federated-with-central-platform is durable for most enterprises
- 7 Adopt the data product pattern — 3-5x AI team speed when data is published as curated, versioned, owned products
- 8 18-month rollout with 4 trust trip-wires you don't cross, plus an interactive builder for your CDO/CIO conversation
