AI for Operations & Supply Chain

A 70-minute playbook for COOs and supply chain leaders — six plays that ship, three pitches that disappoint, the data-stable filter, and a 2-quarter roadmap with operational KPIs (not AI metrics).

Course Overview

No vendor-pitch hype. Six operations AI plays that consistently produce measurable savings — demand forecasting, procurement document AI, logistics optimisation, predictive maintenance, inventory intelligence, supplier risk monitoring — and three pitches that consistently disappoint, named explicitly so the budget redirects. The data-stable filter that decides which plays to start with in your specific operation.

FORMAT: Self-paced · 8 chapters · audio-narrated slides · interactive end-of-course builder · free certificate on completion

Who Is This For?

1

COOs · CSCOs

2

Supply chain VPs

3

Procurement leaders

4

Operations + logistics
heads

Learning Outcomes

- 1 6 operations AI plays that consistently produce measurable savings — forecasting, procurement docs, logistics, predictive maintenance, inventory, supplier risk
- 2 3 pitches that consistently disappoint — named explicitly so the budget redirects
- 3 The data-stable filter that decides which plays to start with in your specific operation
- 4 The two-layer demand forecasting model — what beats the median MAPE trap
- 5 The 3-tier procurement human-in-the-loop with audit posture
- 6 The AI-amplifying-OR framing for logistics — where AI augments operational research, not replaces it
- 7 The dynamic safety stock approach that solves stock-outs and overstock together
- 8 A 2-quarter roadmap with operational KPIs (procurement capacity, service level, working capital) — not AI metrics

8-Chapter Curriculum

Self-paced, audio-narrated slide format. Each chapter ends with a "Monday move" the learner can apply that week.

01

The ops-AI fit map

CHAPTER 1 · 9 MIN · NARRATED + INTERACTIVE

- Six plays that ship
- three pitches that disappoint
- the data-stable filter (data ready + process stable) that sequences your roadmap.

02

Demand forecasting with AI

CHAPTER 2 · 10 MIN · NARRATED + INTERACTIVE

- Two-layer model (ML on history + LLM on unstructured signal)
- four-check data-readiness gate
- the three-component handoff that gets planners to actually use it.

03

Procurement document AI

CHAPTER 3 · 10 MIN · NARRATED + INTERACTIVE

- Three document types that ship + one that overpromises (contracts)
- three-tier human-in-loop
- four-component audit posture for external review.

04

Logistics optimisation

CHAPTER 4 · 9 MIN · NARRATED + INTERACTIVE

- AI amplifies OR — never replaces it
- three plays that ship (dynamic re-routing, driver narrative, anomaly detection)
- three situations to NOT deploy yet.

05

Predictive maintenance

CHAPTER 5 · 9 MIN · NARRATED + INTERACTIVE

- Sensor-plus-narrative pattern (never sensor-only)
- three vendor traps to refuse
- three-component handoff into the existing CMMS.

06

Inventory intelligence

CHAPTER 6 · 9 MIN · NARRATED + INTERACTIVE

- Stock-outs and overstock are the same problem
- four velocity tiers with differentiated safety stock
- action formats matched to operational cadence (daily/weekly/monthly).

07

Supplier risk and end-to-end visibility

CHAPTER 7 · 9 MIN · NARRATED + INTERACTIVE

- Five signal sources (news, financial, regulatory/trade, climate, tier-2 visibility)
- three dashboard discipline rules
- four-phase response cadence.

08

Capstone — Your 2-quarter operations AI roadmap

CHAPTER 8 · 8 MIN · NARRATED + INTERACTIVE

- Two plays, two quarters (procurement Q1, forecasting + safety stock Q2)
- operational KPIs not AI metrics
- four conversations Monday.
