75 MIN

Building AI Agents with Copilot Studio

A 75-minute production-readiness course for Power Platform builders — architecture, topic vs generative, plugins, agents, knowledge sources + MCP + Dataverse, ALM, and governance at scale.

Course Overview

No vendor-pitch hype. Six components of the Copilot Studio stack with three architectural decisions made deliberately at the start. The four-question framework for topic vs generative answers — and the topic-explosion anti-pattern most teams hit by their twentieth topic.

FORMAT: Self-paced · 8 chapters · audio-narrated slides · interactive end-of-course builder · free certificate on completion

Who Is This For?

1

Power Platform builders

2

AI developers

3

Solution architects

4

L&D + internal trainers

Learning Outcomes

- 1 The 6 components of the Copilot Studio stack — and the 3 architectural decisions made deliberately at the start
- 2 The 4-question framework for topic vs generative answers — avoid the topic-explosion anti-pattern most teams hit by topic 20
- 3 Plugins + connectors at production scale — the 4-component auth model and 3 production failure modes
- 4 Agents + agent flows with state isolation tested under concurrent load — not just in single-user demos
- 5 Knowledge sources at scale — SharePoint, files, web, MCP, Dataverse with row-level security
- 6 Deployment through 3 environments with managed solutions and pipelines that scale across the estate
- 7 Governance with 3 layers — tenant, environment, per-agent — plus the 5 monitoring signals you watch
- 8 The 12-item production-readiness checklist and 4 week-one conversations to schedule with stakeholders

8-Chapter Curriculum

Self-paced, audio-narrated slide format. Each chapter ends with a "Monday move" the learner can apply that week.

01

Copilot Studio architecture

CHAPTER 1 · 10 MIN · NARRATED + INTERACTIVE

- Six components and where each runs
- three architectural decisions you make at the start
- governance touchpoints from day one (DLP, auth, sensitivity labels).

02

Topic design vs generative answers

CHAPTER 2 · 9 MIN · NARRATED + INTERACTIVE

- The four-question decision framework per intent
- the topic-explosion anti-pattern (recognition degradation, maintenance fatigue, trigger overlap)
- the hybrid pattern mature agents converge to.

03

Plugins and connectors at production scale

CHAPTER 3 · 10 MIN · NARRATED + INTERACTIVE

- Three connector patterns (first-party
- certified third-party
- custom)
- four-component auth model
- three production failure modes (errors, rate limits, latency variance).

04

Agents and agent flows

CHAPTER 4 · 10 MIN · NARRATED + INTERACTIVE

- Three differences that make an agent (state, reasoning, tool composition)
- three orchestration patterns (Q&A
- transactional
- research)
- state isolation tested under concurrent load.

05

Knowledge sources, MCP, and Dataverse grounding

CHAPTER 5 · 10 MIN · NARRATED + INTERACTIVE

- Three knowledge source types
- MCP integration with per-agent scope-down + observability
- Dataverse grounding with RLS, security roles audit, field-level security, cross-role test before launch.

06

Deployment, ALM, and environments

CHAPTER 6 · 9 MIN · NARRATED + INTERACTIVE

- Three-environment promotion path (dev/test/prod)
- three solution rules (one agent per solution, managed in test/prod, semantic versioning)
- three pipeline patterns matched to scale.

07

Governance and monitoring at scale

CHAPTER 7 · 10 MIN · NARRATED + INTERACTIVE

- Three governance layers (tenant, environment, per-agent)
- five monitoring signals (usage, recognition, action success, cost, feedback)
- three estate-management rhythms (weekly, quarterly, annual).

08

Capstone — Your production-grade Copilot Studio agent

CHAPTER 8 · 8 MIN · NARRATED + INTERACTIVE

- Three-section agent design document
- 12-item production-gate checklist (4 architecture, 4 security, 4 operations)
- four conversations Monday.
