Working with Copilots

A 50-minute practical guide for professionals already using M365 Copilot, GitHub Copilot, or ChatGPT Enterprise — when to lean in, when to skip it.

Course Overview

For analysts, managers, and individual contributors already issued M365 Copilot, GitHub Copilot, or ChatGPT Enterprise. Seven chapters: the three-layer mental model (chat / grounded / agentic); the time-to-decent-draft test for when to use Copilot at all; the four Office workflows (Word, Excel, Outlook, Teams) plus the wrong-file trap; GitHub Copilot for non-developers (spreadsheets, regex, scripts); the three things ChatGPT Enterprise does that M365 Copilot can't (deep research, Operator agents, Canvas); security and data-exposure boundaries with Microsoft's own quotes on Restricted SharePoint Search and the EU Data Boundary gotcha; and the close — your one-page operating manual with 5 always-use tasks, 3 nevers, and the Friday review.

FORMAT: Self-paced · 8 chapters · audio-narrated slides · interactive end-of-course builder · free certificate on completion

Who Is This For?

1

Professionals using
M365 Copilot

2

GitHub Copilot users

3

ChatGPT Enterprise
users

4

AI-adopting knowledge
workers

Learning Outcomes

- 1 How M365 Copilot, GitHub Copilot, and ChatGPT Enterprise differ in strength and weakness
- 2 When to lean in on a Copilot — the use cases where it materially compresses time
- 3 When to skip it — the patterns that look like Copilot work but aren't
- 4 The data-handling rules per Copilot — tenant, project, public — and what each surfaces
- 5 The review discipline for Copilot output — speed-of-draft is not speed-of-ship
- 6 Practical habits per workflow — coding, writing, analysis, meetings — that make Copilot multiplicative
- 7 How to evangelise inside your team without becoming the AI tax-collector

7-Chapter Curriculum

Self-paced, audio-narrated slide format. Each chapter ends with a "Monday move" the learner can apply that week.

01

The Copilot mental model

CHAPTER 1 · 8 MIN · NARRATED + INTERACTIVE

- Copilot isn't one thing — it's three.
- Chat-only, grounded, and agentic.
- The trick to using them well is knowing which layer you're talking to.

02

When to use Copilot vs. do it yourself

CHAPTER 2 · 7 MIN · NARRATED + INTERACTIVE

- The one-sentence test — time-to-decent-draft.
- Three patterns that always lose.
- Honest counter-data from the Australian government Copilot trials.

03

Office Copilot workflows

CHAPTER 3 · 7 MIN · NARRATED + INTERACTIVE

- One workflow per app — Word, Excel, Outlook, Teams.
- Plus the recurring trap: Copilot grabs the wrong file because of permission/path defaults.

04

GitHub Copilot for non-developers

CHAPTER 4 · 7 MIN · NARRATED + INTERACTIVE

- Copilot Spaces + Agent Mode broke GitHub Copilot out of code-only.
- Spreadsheets, regex, weekly automation — three use cases a non-dev can ship.

05

ChatGPT Enterprise edge cases

CHAPTER 5 · 7 MIN · NARRATED + INTERACTIVE

- Three things ChatGPT Enterprise does that M365 Copilot doesn't — deep research with citations, Operator-style web agents, Canvas co-editing.

06

Security and data-exposure boundaries

CHAPTER 6 · 8 MIN · NARRATED + INTERACTIVE

- Microsoft's own words: "Restricted SharePoint Search isn't a security boundary." The EU Data Boundary Anthropic gotcha.
- EU AI Act, NIST RMF, India DPDP.

07

Making it stick: your Copilot operating manual

CHAPTER 7 · 6 MIN · NARRATED + INTERACTIVE

- Five always-use tasks.
- Three nevers.
- The Friday review.
- Fill in the operating-manual builder, download the markdown, print it, pin it where you can see it.
