Building AI Agents with Copilot Studio

A ~30-minute production-readiness course for Power Platform builders. 6 components, 4-question topic framework, 12-item production gate. Voice: Andrew.

Course Overview

For Power Platform makers, Copilot Studio architects, ITSM leads, and IT teams owning agent estates. Copilot Studio is a stack, not a single product — six components with three architectural decisions made deliberately at the start. The 4-question framework for topic vs generative answers (deterministic · compliance · small known set · frequency) and the topic-explosion anti-pattern most teams hit by their 20th topic.

FORMAT: Self-paced · 8 chapters · audio-narrated slides · interactive end-of-course builder · free certificate on completion

Who Is This For?

1

Power Platform builders

2

AI developers

3

Solution architects

4

L&D + internal trainers

Learning Outcomes

- 1 The 6 components of the Copilot Studio stack — and the 3 architectural decisions made deliberately at the start
- 2 The 4-question framework for topic vs generative answers — avoid the topic-explosion anti-pattern most teams hit by topic 20
- 3 Plugins + connectors at production scale — the 4-component auth model and 3 production failure modes
- 4 Agents + agent flows with state isolation tested under concurrent load — not just in single-user demos
- 5 Knowledge sources at scale — SharePoint, files, web, MCP, Dataverse with row-level security
- 6 Deployment through 3 environments with managed solutions and pipelines that scale across the estate
- 7 Governance with 3 layers — tenant, environment, per-agent — plus the 5 monitoring signals you watch
- 8 The 12-item production-readiness checklist and 4 week-one conversations to schedule with stakeholders

8-Chapter Curriculum

Self-paced, audio-narrated slide format. Each chapter ends with a "Monday move" the learner can apply that week.

01

Copilot Studio architecture

CHAPTER 1 · 4 MIN · NARRATED + INTERACTIVE

- 6 components
- 3 architectural decisions (environment
- auth
- knowledge sources)
- governance from day one.

02

Topic design vs generative answers

CHAPTER 2 · 4 MIN · NARRATED + INTERACTIVE

- 4-question framework
- topic-explosion anti-pattern
- the hybrid pattern mature agents converge to.

03

Plugins and connectors at production scale

CHAPTER 3 · 4 MIN · NARRATED + INTERACTIVE

- 3 connector patterns
- 4-component auth model
- 3 production failure modes (errors
- rate limits
- latency).

04

Agents and agent flows

CHAPTER 4 · 4 MIN · NARRATED + INTERACTIVE

- 3 differences (state
- reasoning
- tool composition)
- 3 orchestration patterns
- state isolation under concurrent load.

05

Knowledge sources, MCP, and Dataverse

CHAPTER 5 · 4 MIN · NARRATED + INTERACTIVE

- 3 source types
- MCP scope-down + observability + versioning
- Dataverse 4-check (RLS
- roles
- field-level
- cross-role test).

06

Deployment, ALM, and environments

CHAPTER 6 · 4 MIN · NARRATED + INTERACTIVE

- 3-environment promotion path
- 3 solution rules
- 3 pipeline patterns matched to scale.

07

Governance and monitoring at scale

CHAPTER 7 · 4 MIN · NARRATED + INTERACTIVE

- 3 governance layers
- 5 monitoring signals
- 3 estate-management rhythms (weekly
- quarterly
- annual).

08

Production-grade Copilot Studio agent

CHAPTER 8 · 4 MIN · NARRATED + INTERACTIVE

- 3-section design doc
- 12-item production gate (4 architecture
- 4 security
- 4 operations)
- interactive builder.
