Learning Outcomes

- 1 The 3 CS-AI patterns that ship in production — agent-assist, scoped deflection bots, hybrid
- 2 The 2 patterns that backfire — full bot deflection without escalation, AI-only triage
- 3 The disciplined agent-assist stack that drops AHT without breaking quality
- 4 The scoped-deflection-bot design — narrow scope, clear escalation, fast handoff
- 5 A 4-week pilot plan with the KPIs that actually prove value (CSAT, FCR, deflection, AHT)
- 6 The Air Canada Moffatt boundary — anything the AI says is a representation by your company
- 7 The disclosure + escalation discipline — EU AI Act Article 50, when to reveal AI, when to hand to human
- 8 The quality-monitoring loop — shadow QA, drift detection, the 5 metrics that matter weekly

8-Chapter Curriculum
